**WE PROVIDE THE ENVIRONMENT...
YOU PROVIDE THE WINE.**

Custom Wine Cooling Equipment

Protecting your wine investment... one bottle at a time!

Whether you're a casual wine enthusiast or serious wine connoisseur, your wine investment is important to you. It needs to be stored under ideal climate conditions to preserve your prized collection.

Designed and manufactured to withstand our Arizona desert climate, Wine Masters by Hobaica cooling systems provide dependable, long lasting performance. And because each system is custom built to order, there are a wide variety of options available.

Our Story...

Hobaica Services was established in 1952 by Paul Hobaica. An early entrepreneur in the up and coming refrigeration industry, Paul serviced the heating, cooling, and refrigeration needs of the Phoenix metropolitan area.

Today, our success continues with the philosophy of our founder, "Treat others as you would want to be treated."

We specialize in the manufacturing, installation and service of custom wine cellar cooling systems. Our systems are professionally designed to satisfy your specialized needs.

We provide 24 hour, 7 days/week service because your wine investment can't always wait for normal business hours. We are licensed, bonded and insured to provide you with the comfort in knowing that your wine will be protected.

Options include:

- Precision temperature control to protect your valuable wine investment
- Redundant backup cooling systems to protect your wine from system failure
- A temperature monitoring system that keeps you in touch with your wine cellar remotely and will notify you if the system malfunctions
- A preventative maintenance plan to ensure years of worry free operation
- All this while maintaining an aesthetically pleasing cooling unit
